### **Chat Mobility launches Text to Landline Service**

September 2010 - TeleMessage, a leading developer of messaging solutions, is pleased to announce that Chat Mobility, a full-service telecommunications provider serving subscribers in southwest and south central Iowa launched its Text to Landline application.

Chat Mobility has added an additional text messaging feature which allows customers to send text messages to home phones all over the US and Canada. Chat Mobility customers simply enter landline number(s) in the "TO" field on their phone, type the message and send it off. The delivered message goes to the home phone as a voice message where landline phone recipients can listen and reply by using their voice. Chat Mobility customers will receive a returned status update via text message and can listen to the returned response.

"The Text to Landline application is a text messaging feature enhancement" says Mark Carlin, Vice President of Sales for the Americas at TeleMessage. "It allows text messengers to communicate with more people."

"Text Messaging is a natural way of communicating for mobile phone users today. 'Text Messaging to Landline Phones' is an extension of communicating with these individuals who do not have mobile phones or text messaging. It also equates to maintaining simplicity our users expect and a great way to utilize a service that's so popular with many subscribers," says Alan DeBolt Marketing Director of Chat Mobility.

**About Chat Mobility**

Serving south central and southwest Iowa with cellular service, where every rate plan is nationwide and includes unlimited incoming minutes, unlimited nights and weekends and unlimited mobile-to-mobile. For more information, visit [www.chatmobility.com](http://www.chatmobility.com) or call 800-944-5526.

**About TeleMessage**

TeleMessage, a fully owned subsidiary of AIM-traded Messaging International Plc (AIM: MES.LN), provides cross-platform media messaging management systems and applications. These are designed to enable PC, browser, mobile phone and wireline telephone users to send, receive and manage voice messages, email, text, MMS and IM across various media platforms. It supports multiple languages, text to speech conversion, e-mail notification, unlimited text length, and direct reply to text capabilities, all illustrating the uniqueness of the service. For more information, please visit [www.telemessage.com](http://www.telemessage.com).
